AI Agent Powered

SUMMARY

My journey into development began in August 2017, with my Bachelor's Degree in Information Systems, and I've been programming and learning almost every day since. I don't just want to perform tasks — I want to work towards the success of projects as a whole, becoming a key player in a company's goals. I'm proficient and self-managed, comfortable working remotely or in-office, and I stay curious, always looking to pick up new hard and soft skills. Currently focused on building the perfect AI-agent workflow.

ACADEMIC HISTORY

BACHELOR'S DEGREE IN INFORMATION SYSTEMS — IFAL

Instituto Federal de Educação, Ciência e Tecnologia de Alagoas — a Brazilian federal institute

PROFESSIONAL EXPERIENCE

SELF MANAGED / FREELANCER

Full Stack Developer

October 2024 - Until now

Working with a global team on a platform that monitors developer efficiency using the Slack API and OpenAI API, for a team focused on code review that values clear, objective communication. Also building and shipping a portfolio of independent products (see Projects) spanning web, mobile, and AI-driven applications.

Technologies used: Node.js, MongoDB, React/React Native, JavaScript/TypeScript, Flutter.

EVOY / MANUSIS4

Full Stack Developer

August 2022 - October 2024

Worked on an IoT device platform, managing more than 10,000 devices and their assets. Built new features in React, Node.js and MongoDB; led architecture decisions on AWS, monitoring the system and seeking performance improvements. Also developed new features on an older Angular/Node.js/MongoDB platform. Worked alongside stakeholders and clients to gather feature requirements, in a team of two developers.

Technologies used: Node.js, React, Next.js, Angular, MongoDB, Docker, Jest, AWS.

BLANKO

Full Stack Developer

September 2020 - June 2022

In a team of 3 developers, built a platform from scratch using React/Next, Node.js and MySQL (Marketing Business domain), and developed new features on an older HTML/CSS/JavaScript platform. Worked closely with stakeholders and the design team to align on ideas.

Technologies used: Node.js, React, Next.js, MySQL, Jest, Docker, AWS.

PROJECTS

Issues Creator — 06/2026

Turns a plain-language request into a well-structured GitHub issue via an admin-provisioned auth system, a GitHub App integration, and an async AWS SQS/Lambda pipeline, with a user-selectable AI model (Anthropic/OpenAI) drafting each issue grounded in repo context.

Next.js 16, TypeScript, MongoDB, AWS (SQS, Lambda, SAM), GitHub App/Octokit (private repository)

Lara — 12/2025

Literacy, visual stimulation, and general learning app for people with low vision.

React Native, Node, TypeScript, MongoDB · Android, iOS

[Google Play](#)

Rackets Up — 10/2024

Racket-sports app: live score tracking from smartphone or smartwatch, knockout/round-robin tournaments, rankings, match history, stats, and leaderboards. Android/iOS plus WearOS and watchOS companion apps.

React Native, Node, TypeScript, MongoDB, Flutter, Swift

[Google Play](#) · [rackets-up.com](#)

Exam AI — 10/2024

AI-powered exam preparation platform that generates exams on any subject and tracks learning history/progress over time. Built as a monorepo (API, Next.js web, Expo/React Native mobile).

React, Next.js, Node, TypeScript, MongoDB, OpenAI

[exam-ai.tech](#) · [GitHub](#)

Shopping List & Duties Tracker (My Home) — 06/2023

Personal grocery-shopping organizer: catalog products, build a cart, and send the list to a local grocery store over WhatsApp once it hits the store's minimum order value. Also tracks recurring household duties/chores.

React (Vite), Node/Express, MongoDB (Mongoose), AWS (SAM)

[Live](#) · [Web repo](#) · [API repo](#)

PlayLingo — 01/2018

Educational Unity game for learning English vocabulary — quizzes and mini-games per word class, with a gamified leaderboard/challenge system. Built during university; passed 5,000+ downloads with a 4.7 rating on the Play Store.

C#, Unity, Node, MongoDB, AWS

[Google Play](#) · [GitHub](#)

FoodTech — 01/2019

Restaurant system with a live/online menu.

Vue, Flutter, Node, MongoDB, AWS

[Google Play](#) · [Web](#) · [API](#) · [App](#)
